

With aging, skin begins to lose hyaluronic acid, collagen, subcutaneous fat and elasticity. As a result of that, and due to the gravitational force and the constant use of the muscles, wrinkles are formed, the face loses its volume and the skin becomes tired and dull.

Botulinum toxin is a natural, purified protein that is injected directly into the facial muscles to prevent the muscle contractions and temporarily relax them. Therefore, it is an excellent treatment to help minimize the appearance of wrinkles, while preventing the formation of new ones.

Botox works for the glabellar region, the forehead, around the eyes, and on 'bunny lines'. For the right candidates, it's also helpful when used in the lower third of the face. It can also be used to treat medical conditions such as hyperhidrosis

The effects of Botox starts after 3-5 days and generally last 3-4 months but can last longer depending on the individual and the area treated.

Hyaluronic acid is a natural component of human body. It is an integral part of many types of tissue, including connective, nervous, cartilage and skin tissue. Hyaluronic acid molecules bind water molecules, so the result of hyaluronic acid filler injection is a youthful appearance of skin. Expert point out that fillers are less invasive in comparison to standard surgical procedures. The most popular rejuvenation methods are those after which patients can immediately return to their daily activities

Filler on the other side is used to bring harmony to the face by optimizing ideal proportions.

Dermal fillers are an injectable gel made from hyaluronic acid.

When we're born, we have plentiful amounts of hyaluronic acid in our body, but as we get older this store of HA diminishes, leaving the skin less well supported, and so lines and wrinkles develop.

Hyaluronic acid molecules bind water, so the result of hyaluronic acid filler injection is a youthful appearance of skin, especially in the lower half of the face, from the nasolabial folds, to the vertical lip lines of the lips, the marionette lines around the mouth, and in the thinning of the lip and volume lost of the cheeks. The aesthetic outcomes of treatments with dermal filler are seen immediately after the treatment.

Treating wrinkles with dermal filler and botox is fast without leaving no scars.

Botox

1 region 2300 kn
2 regions 3200 kn
3 regions 4000 kn

Silhouette soft lift

1 pair of threads 8000
2 pair and 14000

HA filer

1 ml filer 4300 kn
3 ml filer 11000 kn

Silhouette soft lift 1 par

+2 ml HA filer 14500
